

Save water?
Save energy?
Save time?
Save money?
And save lives?

Relax, Sunbather Security Blankets have it covered.

With the strength of a floating garage roller door the Sunbather Automatic Security Blanket slowly moves across the pool to safely seal the water surface.

Made from attractive, interlocking slats, its operation is fully automatic and it carries the Smart Approved Watermark. See our website for video demonstrations. www.sunbather.com.au

Sunbather has pool covers for every size and shape of pool starting from as little as \$1200. For more information on Sunbather's vast range just visit the website at www.sunbather.com.au or ring **1800 268 377** that's...

1800 COVERS

Authorised Dealer:

Sunbather Pty Ltd
ABN 81 004 898 631
Head Office 2174 Frankston-Flinders Road
Hastings Victoria 3915
PO Box 107 Hastings Victoria 3915

Sunbather's Security Pool Blanket now with exclusive Cover Protection System.

BENEFITS:

Simplicity of operation make it ideal for pools servicing small communities as well as residential and special purpose pools. Eliminates evaporation from all pools and overcomes many condensation problems associated with indoor heated pools. Heating, water treatment and general maintenance costs are greatly reduced.

SECURITY:

The cover is not designed for adult foot traffic, but will easily support the weight of a small child or animal should they stray onto the cover. However, unless the pool owner has obtained special exemption from the local authority the security cover does not replace the need for a pool fence.

OPERATION:

The cover floats on the water surface and is driven by electric motor / gearbox mechanism linked to the storage shaft. Controls are activated by a removable key in a flush mounted switchplate.

MODELS:

There are 2 models designed for specific applications.

SSB-1 is designed to be fully integrated into a new concrete pool construction. It retracts fully and completely disappears below pool coping level.

SSB-2 is suitable for fitting to new or existing geometrically shaped pools and is stored on a roller above ground at one end of the pool.

COLOUR OPTIONS:

White, cream, beige and light grey. Designer colours and transparent covers available by special order. Shape & Size: Geometric shapes are preferred, but some curves and step areas can be incorporated. Pools up to 25m long including lap pools can be fitted. Please contact us for advice on individual pools.

THE CPS SYSTEM:

Unless specified, all SSB-1 units are fitted with a patented Cover Protection System (CPS). The CPS system protects your investment by automatically maintaining correct water levels in the pool. It also shuts the system down if the cover hits an obstruction during deployment. A display panel monitors the status of the system at all times.

TECH SUPPORT:

Engineering drawings designed to assist pool builders in the initial design and construction of the pool are made available at the beginning of each installation. We can supply many options including storage lid grating, extra keyswitch modules, water levelling devices etc. Sunbather technical staff are always available to assist during all stages of the project.

PRICING:

Indicative pricing and technical information for a particular project should be obtained from Sunbather Head Office.
